SIMAIR Gloobooths.

The Simair Gloo-Booth is specifically designed for use with aerosol adhesives, fixatives or similar products, and incorporates high volume suction fans to draw away contaminated air. The two separate filtering systems limit the effects of overspray and help to protect the operator. This machine is fitted with replaceable hood surrounds
Available in A1 Steel, A2, A3 and A4 Polymer.

Accessories.

Air Ducting Kit

This is recommended to be fitted to your A1 or A2 machine, wherever possible, to further enhance its effectiveness

Gloo-booth Service Kit A1, A2 and A3

To help keep your Gloo-Booth in top condition this service kit includes 4 intake filters, 1 exhaust filter, 1 hood and 1 artwork mesh.

Gloo-booth Charcoal Exhaust Filter A2, A3 and A4

Working as one filter in the advanced filter system incorporated into Simair Gloo-Booths the secondary charcoal filter is constructed using high grade activated charcoal impregnated polyester fibre which has long been recognised as an exceptionally absorbent material to retain vapours and gases. Filters need to be replaced every six months or when solvent odour increases noticeably.

Gloo-booth A3 Intake Filter A2, A3 and A4

Working as one filter in the advanced filter system incorporated into Simair Gloo-Booths the initial intake filter is constructed firstly to provide a high capacity collection area, then absorb the finer particles, and finally collect the micro-particles. Filters need to be replaced dependent on use.

Gloo-booth Hood A1,A2, A3 and A4

Replacement hood to help keep your Gloo-Booth in top condition.
